

NUKEWATCH UK

Is Scotland ready to cope with a nuclear weapon convoy accident?

Convoy routes through Central Belt

Scottish Council areas on convoys routes

Balancing the RISK

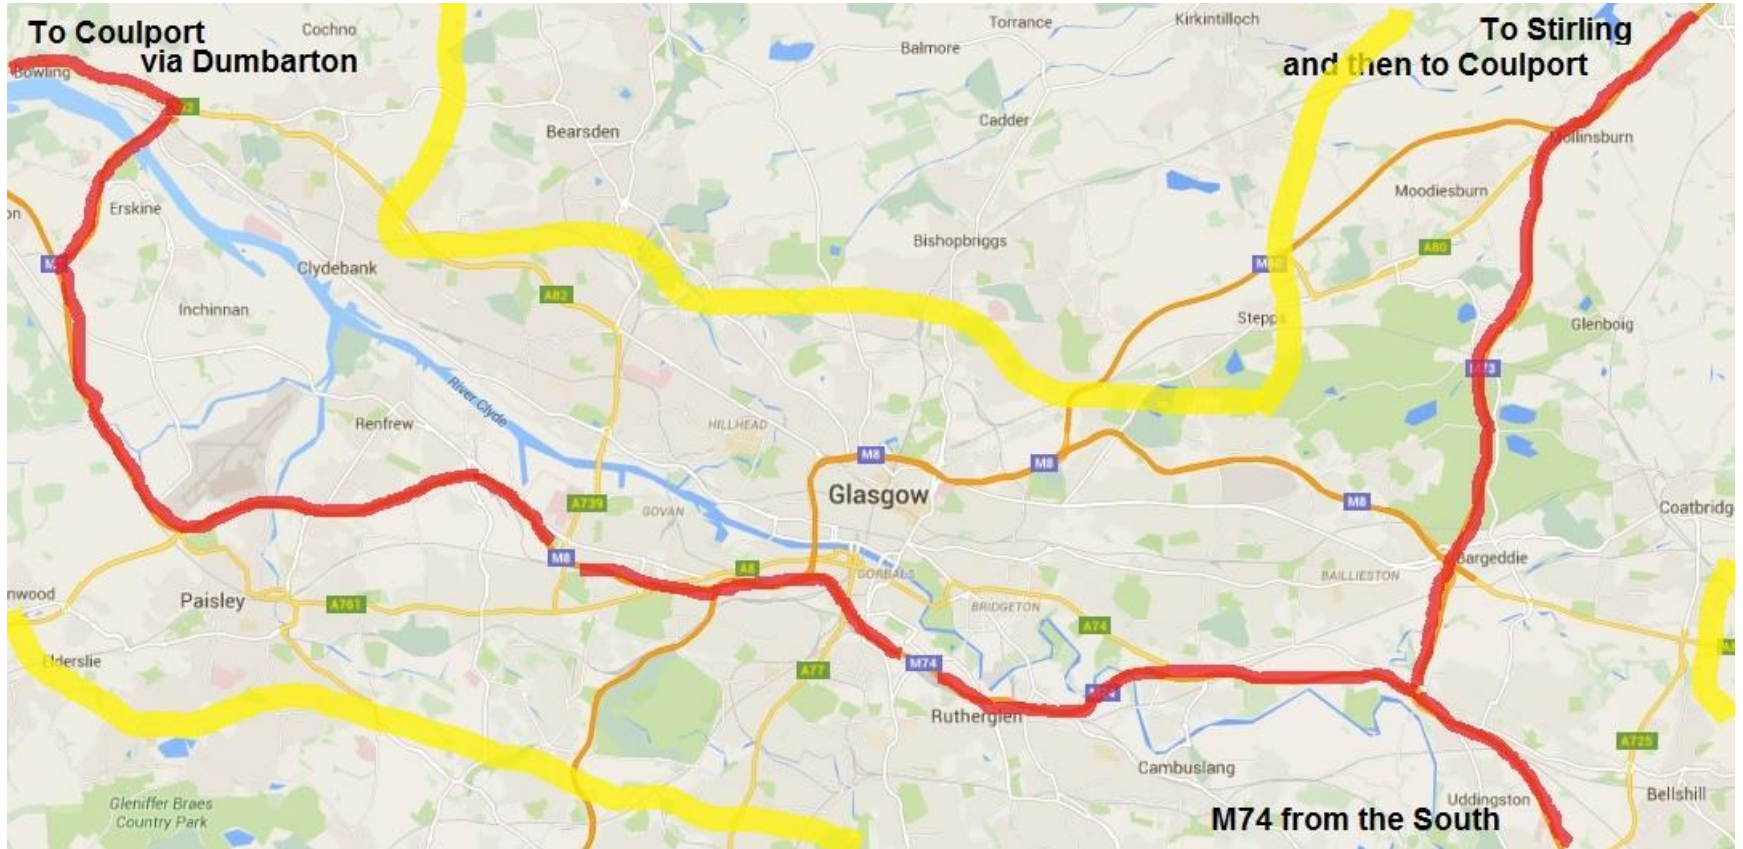

- The probability of a serious accident
- The consequences of a serious accident
- Are there benefits in taking the risk – or could it be avoided altogether?

MOD “Nuclear safety risks are tolerable when balanced against the strategic imperative to move nuclear weapons”

Scotgov Preparedness Review references only **one** of the three essential elements of a credible risk assessment – the likelihood of an incident.

It also uncritically adopts the MoD's account of the likelihood of an incident – no use is made of independent expertise.

Glasgow 5km from convoy routes

What is the exact plan for the evacuation of 250,000 citizens in the event of a serious incident at Tradeston in Glasgow?

Do such plans exist?

What about the option for C1Rs to say that we could not cope?
